

Any method, technique, product, etc. that contributes to strike and eliminate the terrible plague that woodland fires are, must be taken into consideration, but it's also true that the indiscriminate use and storage of some extinguishers could, due to budget reasons, be of detriment of its proved efficiency.

Fire Knock-Out can confirm that their extinguishers fully comply with the tasks for what they were created and so have been guaranteed by each one of the technicians from private or public institutions that have studied them during different tests and demonstrations, as capable of extinguishing any kind of woodland fire.

We pay special attention to **Fire Knock-Out** extinguisher in front of what we call in forest slang, "to cut the head of the fire". No other known product is capable to face, stop, put out or extinguish the front of the fire without any danger at all, only with **Fire Knock-Out** extinguisher.

Adding to its proved efficacy is the economic cost of the extinguisher, **Fire Knock-Out** prices are substantially lower than any other product and we can prove it (one **Fire Knock-Out** extinguisher reaches from 2 to 5 meters out, depending on undergrowth. Due to the lack of expiry date, we recommend to buy and store big quantities of **Fire Knock-Out** extinguisher, safely protecting the warehouse from fires, as there are no possibilities of chain reaction or secondary detonation.

Extinguishing techniques tendencies are evolving towards air resources avoiding a direct fire attack by people that, most of the times, risk their own lives. Helicopters well equipped with **Fire Knock-Out** extinguishers can be in at the forefront of fire strikes.

We also suggest the convenience of providing every kind of transport or patrol vehicles (cars, trucks, helicopters, etc) with a roof rack or any other system that allows carrying a huge quantity of **Fire Knock-Out** extinguishers with the purpose of cutting the fire up quickly and easily with only two men.

When we refer to any kind of vehicle we do not exclude water tanker lorry, as everybody known, there is a lack of resources while taking on provisions, if there are no **Fire Knock-Out** extinguishers, fire can be reactivated.

We would like to point out the importance of providing these kinds of vehicles above mentioned with **Fire Knock-Out** extinguishers. Due to the difficulties that most of the times the land topography presents, it is really hard to reach the fire with a fire hose even when there is a lot of water. However, with **Fire Knock-Out** extinguishers it would be very easy to reach the target whatever the situation is.
