

ANTI-PERSONNEL MINES SOLUTION: Fire Knock-Out (FKO) type 'FKO-5'

- **Principle:** A new and innovative solution for Anti-Personnel Mines. Quick, effective, safe and low-cost!
- **Functioning:** A circular platform (2) is placed on top the Anti-Personnel Mine (1). On top of the circular platform a FKO 5 kg is placed (3), preferably in the middle. The slow-fuse (4) is laid out to the side. The slow burning fuse provokes the detonation of the Fire Knock-Out (3), which subsequently provokes an explosion of the Anti-Personnel Mine (1). During the explosion the liquid content of the FKO very effectively covers the whole surrounding area, thereby stopping any possible fires from happening.

Sequence 1: Mine is detected

Sequence 2: Mine is covered by circular platform

Sequence 3: FKO 5kg is carefully placed on top of circular platform

Sequence: 4 Fused is lighted

Sequence 5: Fuse detonates FKO and Mine

Sequence 6: End result, a big hole
